

PACKAGED ROOFTOP UNITS AND SEPARATED GAS MODULE OPTION

- High efficiency
- Superior reliability
- Compact system
- Energy recovery
- Variable speed EC fans

50FF/FC 020 - 093

Nominal cooling capacity 22.3 - 90.2 kW
 Nominal heating capacity 21.9 - 89.7 kW

The new **50FF/FC** packaged rooftop range consists of autonomous compact air-air units of horizontal design, rooftop type.

■ **50FF series:** for **cooling-only** operation.

■ **50FC series:** for **reversible heat pump** operation.

The range of available capacities in the series allows for the air conditioning of medium and large surface areas which are common in shopping malls, food retail, logistics and many other commercial and industrial applications.

50FF/FC units are designed for optimized part-load management in achieving the highest levels of seasonal efficiency, exceeding the limits set by regulation.

With its mono-block lightweight construction, the units feature a self-supporting frame, designed to ease the installation and maintenance works.

The units integrate the latest technological innovations:

- Multi-scroll compressors.
- Electronic expansion valves.
- Variable speed EC fans.
- Auto-adaptative microprocessor control.

For maximum adaptability, a number of options is available to meet any operating requirement:

- Exhaust air energy recovery.
- Economizer.
- Indoor air quality management.
- Installation roofcurbs.
- Auxiliary heating modules.
- Extended operation limits.

FEATURES AND ADVANTAGES

Carrier's new range of packaged rooftop air conditioning units 50FF/FC has been designed to set high standards in performance. The series offers design flexibility, ease of installation, quality and superior reliability thanks to the number of technological improvements and the available options that allow for seamless integration in the building.

Designed to withstand outdoors installation, it can operate all-year-round performing at the highest levels of seasonal efficiency thanks to the management of the new control inside.

The high efficiency cooling circuits have been developed as to eliminate any leaks caused by any vibration modes and designed with state-of-the-art components including electronic expansion valves in all the circuits. The refrigerant circuits come fitted with pressure transducers and temperature sensors which allow for accurate control on the operation conditions together with the management of the fans speed.

The cabinet has been designed and tested for the most demanding conditions. With double skin insulated side panels as standard, all the sheet metal work comes in powder-coated finishes outdoors and indoors. The self-supporting structure has been conceived also to reduce weight and to optimize transportation capabilities. Thorough transportation tests have been also conducted as to validate the two-height stackable feature.

Ease of maintenance is also granted thanks to the great accessibility to components through removable side panels, access doors fitted with dual hinges with locking functions or removable outdoor fans covers. The condensates drain pan is now removable for easy cleansing.

Additional energy savings are possible thanks to multiple options such as economizers, exhaust air energy recovery or indoor air quality sensors. This can also be combined with scheduling functions or BMS integration through many standardized protocols.

Design flexibility

All 50FF/FC units are field-convertible to horizontal air flow. Being able to convert a unit from vertical airflow to horizontal makes it easy to overcome job site complications.

■ Vertical supply/return units are ideal for new construction or retrofit to existing installations. The low unit profile is maintained when the unit is installed on the accessory roofcurb.

The ducts can be attached directly to the roofcurb to allow all ductwork to be completed before the unit is positioned.

- Horizontal units are ideal for replacement or applications such as through-the-wall where sound must be attenuated before the duct penetrates the roof. Ducts connect directly to the unit. Horizontal units may be curb or slab mounted.

Easy and fast installation

The unit is connected directly to an air distribution ductwork without additional elements or equipment, pipes, cables, etc. taking no floor space at all. This design reduces the cost of installation, facilitates a quick connection and ensures reliable operation.

A vast number of options integrated in the unit meet many operating requirements.

Superior reliability

- Excellent full and part load efficiencies are achieved by using tandem scroll compressors. The compressors are equipped with crankcase heaters and protected by electronic sensors and logic to control minimum on and off times and reverse rotation.
- All units are tested at various stages on the production line for circuit leakage, electrical compliance and refrigerant pressures.

Advanced technology and performance

In tertiary sector installation, a high percentage of the annual air conditioning energy consumption comes from the use of fans for transporting air. Using fans which are more efficient has a direct impact on reducing consumption.

- Electronic plug-fans in the indoor circuit with direct drive and variable speed offer the following advantages:
 - Elimination of friction losses during transmission thanks to the direct drive.
 - Greater aerodynamic efficiency of the rotor (reactive blades with an optimized profile), running at very high operating pressures.
 - Greatly increased motor efficiency. Permanent magnets DC motors activated using electronic switching integrated into the motor itself.
 - Variable speed to ensure a constant supply air flow rate, independent of the filters clogging level.
 - Measuring the flow rate thought a calibrated section at the fan intake and a differential pressure sensor allows the control to handle the flow rate reliably and precisely in both on CAV and VAV systems.
- Electronic axial fans in the outdoor circuit which adapt the rotation speed to the installation's requirements, reducing electricity consumption, the sound level at part load and improving the unit's average seasonal efficiency.

Environmental care

- Making an environmentally responsible decision is possible when using R-410A refrigerant.

This refrigerant is an HFC refrigerant that does not contain chlorine that is damaging to the ozone layer, and unaffected by the Montreal Protocol. R-410A refrigerant is a safe, non-toxic, efficient and environmentally balanced for the future.

- Also, to reduce the environmental impact, this new series is not requiring any wooden pallets for handling, thus eliminating not only the waste disposal but avoiding the cut of trees.

KEY FOR CONFIGURATION

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y

A: Graphic terminal in electrical cabinet

B: User terminal in electrical cabinet

C: Graphic terminal in the cabinet + User terminal remote up to 100 m

D: User terminal in the cabinet + Graphic terminal remote up to 200 m

E: Graphic terminal in the cabinet + Graphic terminal remote up to 200 m

F: Touch panel in electrical cabinet

G: Touch panel in the cabinet + Graphic terminal remote up to 200 m

H: Touch panel in the cabinet + User terminal remote up to 100 m

V: Miscellaneous item 1

000 – Without options

A: On-off control of an humidifier

B: Proportional control of an humidifier

A: Electrical energy meter

B: Cooling capacity & elec. energy meter

A: Unused

W: Miscellaneous item 2

AA00 - Switching devices + std phase relay

A: Compressor soft starter

A: Varnish protection

B: High performance phase sequence relay

B: High grade switching devices

X: Centrifugal return fan

0000 - Without centrifugal return fan

A: Low flow and nominal pressure

B: Low flow and high pressure

C: Nominal flow and nominal pressure

D: Nominal flow and high pressure

E: High flow and nominal pressure

F: High flow and high pressure

Unused

Y: Indoor air direction (cooming soon)

0000 - Lower direction

0: Lower supply and lower return

1: Lateral supply and lower return

2: Lower supply and lateral return

3: Lateral supply and lateral return

Unused

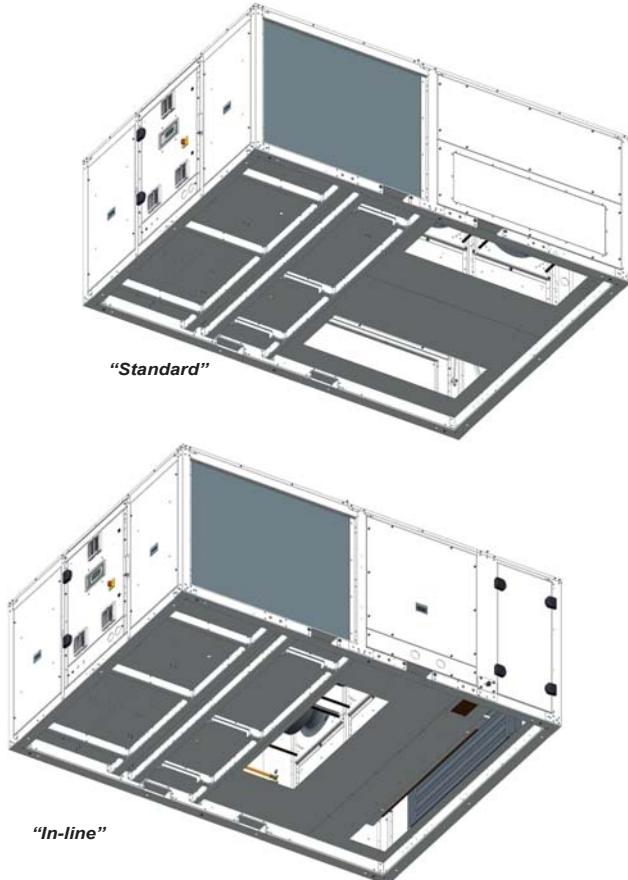

UNIT COMPONENTS

Casing

- Casing made of galvanised steel metal with polyester paint, white colour RAL 7035.
- New self-supporting frame that allow the transport of two stacked units and without the need for a wooden pallet.
- Removable panels for easy access to all components: electrical cabinet, compressors, fans, filters, etc.

Indoor unit

- Two configurations are available, depending on the indoor air flow direction: "Standard" (all models) and "In-line" (models 052 to 093).

- Thermal and acoustic insulation, in double wall panels and registers, with Euroclass A2-s1, d0 (M0) fire classification.
- Coil with copper pipes and aluminium fins.
- EC electronic supply plug-fans directly coupled with variable control speed and flow rate controller.
- Reusable gravimetric air filters G4, mounted on a frame.

Dual locking system mounted on the access panel to filters.

- Removable and isolated condensates drain pan for easy cleaning.

Outdoor unit

- Coil with copper pipes and aluminium fins.
- EC electronic axial fan(s) which adapt the rotation speed to the installation's requirements, thereby reducing electricity consumption, the sound level at partial charge and improving the unit's average seasonal efficiency.
- The cover with the motor fan(s) may be lifted to access the inside of the outdoor unit.

Cooling circuit

- Hermetic scroll-type compressors in tandem design that improves the management of stages and the part load efficiencies. Sound insulation, assembled over antivibration mounts. Control of phase equilibrium and the direction of rotation.
- Crankcase heater.
- Electronic expansion valve(s).
- Four-way cycle reversing valve(s) (heat pump units).
- Acid-resistant filter(s) dryer.
- Cooling design with:
 - 1-air volume: models 50FC 020 to 047 and models 50FF.
 - 2-air volumes: models 50FC 052 to 093.

Protections

- High pressure pressostat(s).
- High and low pressure transducers.
- Compressor discharge temperature control.
- Main door switch.
- Magnetothermic protection switches for the power line of compressors and fan motors.
- Automatic switch in the control circuit.

Electrical cabinet

- Complete and fully wired electrical cabinet. Insulated access door to prevent condensation. Forced ventilation of the electrical cabinet. Protection IP54.
- Numeration of wired and identification of components in the electrical cabinet. It permits easy tracing and diagnostics.
- Hinges + quarter-turn latches on the removable access door.
- Electrical power supply with neutral.
- Main ground connection.
- Compressor and fan motor contacts.

OPERATING LIMITS

Inlet air conditions		Cooling		Heating		
		50FF	50FC		50FC	
Indoor coil	Minimum temperature	13°C WB		Indoor coil	Minimum temperature	
	Maximum temperature	24°C WB			27°C	
Outdoor coil	Minimum temperature	12°C (1)		Outdoor coil	Minimum temperature	
	Maximum temperature	52°C	48°C		-15°C WB (2)	
(1) With a condensation pressure control operating down to -10°C.						
(2) When the outdoor temperature is usually below 5°C WB, the installation of a support element is recommended.						

CONTROLS

"50FC" control

Factory-installed "50FC" control provide the capability for free standing operation or may be linked with a more extensive system. Factory-installed and programmed Modbus communication capability provides simple integration with the building BMS system.

The 50FF/FC range may also be configured to communicate via LonWorks®, BACnet™ and Konnex protocols, if required by the application.

The "50FC" control also have the capability to communicate with our supervision solutions: **pCO Web**, **PlantWatchPRO3** and **BOSS**.

This communication flexibility allows simple system integration, as well as data collection, trending, monitoring and alarm displays. The control provides unparalleled service diagnostic information.

This control also manages a local connection between units through a pLAN network (Local Area Network), allowing data and information to be exchanged between units, for a maximum of 15 units.

The "50FC" control are your link to a world of simple and easy-to-use rooftop units that offer outstanding performance and value. With the sensors, it maintains control over all the components of the unit and helps optimise the performance of the refrigeration circuits as conditions change, resulting in the following features:

- Higher part load efficiency.
- Better control of temperature.
- Superior reliability.
- High ambient cooling operation at 48°C.
- Low ambient cooling operation at -15°C WB.

The main functions of this control are:

- Selection of setpoint and operating mode: HEATING / COOLING / AUTO / VENTILATION.
 - Continuous control of the operating parameters.
 - Display of the values measured by the sensors.
 - Compressors cycles.
 - Defrosting management.
 - Control of the supply air temperature.
 - All-seasons operation via the condensation and evaporation pressure control.
- The management of the unit in cooling mode is based on the principle of a high floating pressure. The condensation pressure setpoint is continually calculated depending on the outdoor temperature. This pressure is regulated by adjusting the air flow on the outdoor fans.
- Setpoint compensation based on the outdoor temperature.
 - Hourly and weekly schedule.
 - Fire protection.
 - Diagnosis of faults and general alarm.
 - Management of all the optional components available for the unit: economizer, back-up heating, CO₂ air quality sensor, energy recovery,...

User interfaces

Graphic terminal

This terminal, fitted as standard on the electrical cabinet, is very easy to use. It provides detailed explanations of control in easy to understand English. No decoding is required.

Only 6, large, easy-to-use buttons are required to maneuver through the entire menus.

■ This terminal is used to:

- Carry out initial programming of the unit.
- Modify operating parameters.
- Switch the unit ON / OFF.
- Select the operating mode and adjust the setpoints.

- Display the variables controlled and sensor values measured.
- Display the current alarms and their historical record.

User terminal (optional)

This terminal can be installed on the electrical cabinet, instead of the graphic terminal. In this case, the remote connection of the graphic terminal is possible.

■ This terminal is used to:

- Switch the unit ON / OFF.
- Select the operating mode and adjust the setpoints.
- Display the installation's temperatures and humidity, outdoor temperature, supply air temperature, CO₂ sensor and opening of the outdoor damper.
- Display alarms codes.

Touch panel (optional)

With the same functions as the graphic terminal, the 4.3 inch touchscreen panel makes interaction between the user and the unit much easier by simplifying navigation between the various screens.

Supervision solutions

Different solutions of supervision are available bases on the dimensions of the installation for unit fitted with A BMS card (Ethernet pCO Web or RS485 Carel / Modbus).

pCO Web

- It is the solution for the management and supervision of a single unit if this incorporates the Ethernet pCO Web card.

PlantWatchPRO3

- This is a solution designed for the monitoring of small and medium-size installations, capable of manage up to 30 units. Suitable for technical environments, no parts are in movement. It's available in two versions: panel and wall. Includes: 7 " touch display, buzzer for notifications, 1 USB port and 1 SD card slot for downloading reports, charge devices models and applying service packs.

For this option, each unit needs one RS485 Carel / Modbus board.

BOSS

- This is the solution for the management and supervision of air-conditioning installations with up to 300 units. Integrated Hotspot Wi-Fi.

It offers advanced monitoring and maintenance functions and allows zones and groups to be created to simplify the management of the installation. It also allows energy meters to be integrated to monitor the installation electricity consumption.

BOSS is available in two versions:

- CPU device.
- CPU device, monitor, keyboard and screen.

For this option, each unit needs one RS485 Carel / Modbus board.

These systems are used to manage the installation remotely. All the information on the system can be accessed via a simple Internet connection. The online interface, the same one used by the local user, enables monitoring and complete configuration of the installation: from the office or anywhere else the user happens to be.

To control multiple sites remotely, there are special tools dedicated to centralized management, such as **RemotePRO** and **RemoteValue**.

- (1) Cooling capacity calculated in accordance with the EN-14511-2018 standard given for indoor temperature conditions 27°C, 19°C WB and 35°C outdoor temperature.
- (2) Heating capacity calculated in accordance with the EN-14511-2018 standard given for indoor temperature conditions 20°C and 6°C WB outdoor temperature.
- (3) Total power input by compressors and motorised fans under nominal conditions, calculated in accordance with the EN-14511-2018 standard.
- (4) Climatic warming potential of a kilogram of fluorinated greenhouse gas in relation to a kilogram of carbon dioxide over a period of 100 years.

Compliance

- Machinery Directive 2006/42/EC (MD)
- Electromagnetic Compatibility Directive 2014/30/EU (EMC)
- Low Voltage Directive 2014/35/EU (LVD)
- Pressure Equipment Directive 2014/68/EU (Category 2) (PED)
- RoHS Directive 2011/65/EU (RoHS)
- Eco-design Directive 2009/125/EC (ECO-DESIGN)
- Energy Labelling Directive 2017/1369/EU (ECO-LABELLING)
- Harmonised Standard: EN 378-2:2012 (Refrigerating systems and heat pumps - Safety and environmental requirements).

FACTORY OPTIONS AND ACCESSORIES

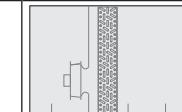

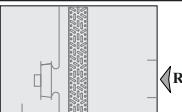

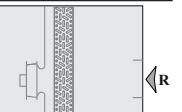

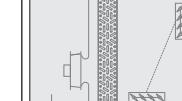

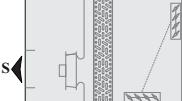

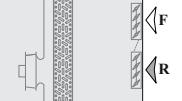

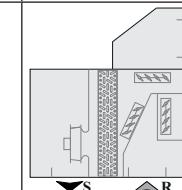

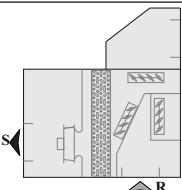

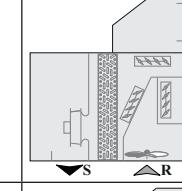

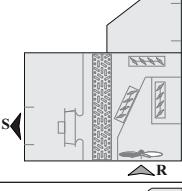

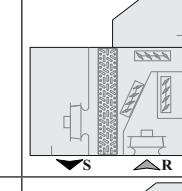

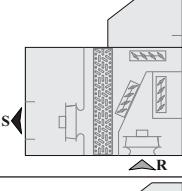

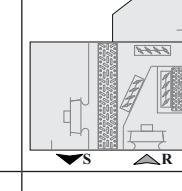

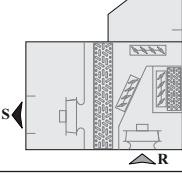

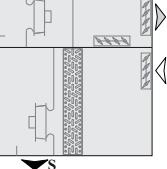

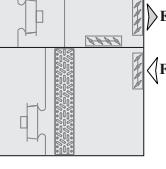

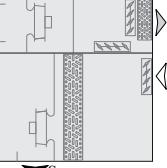

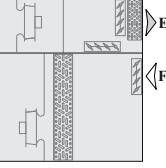

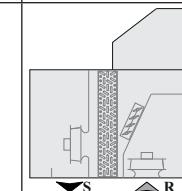

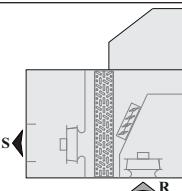

Summary table

Category	Description	Factory installed option	Field installed accessory	Models
Electrical power	400 V / 3 ph / 50 (without neutral)	X		All
Flow + Assembly	B2: Standard. Economizer, 2 dampers	X		All
	B3: Standard. Economizer, 3 dampers	X		All
	BX: Standard. Axial fan in return section	X		All
	BP: Standard. EC plug-fan in return section	X		All
	BA: Standard. Cooling recovery circuit with EC plug-fan in return section	X		All
	BT: Standard. Return top box with EC plug-fan or centrifugal fan	X		All
	BB: Standard. Cooling recovery circuit with EC plug-fan or centrifugal fan in return top box	X		All
	BW: Standard. Heat recovery wheel module	X		All
	R2: In-line. Economizer, 2 dampers	X		052 to 093
	RP: In-line. EC plug-fan in return section	X		052 to 093
	RW: In-line. Heat recovery wheel module	X		052 to 093
Coil coating	Coils with copper-made pipes and fins	X		All
	INERA® coils with aluminium alloy fins and copper pipes	X		All
	Coils with polyurethane precoated aluminium fins and copper pipes	X		All
	Blygold® coating	X		All
Heating	Auxiliary hot water coil : Standard or Very low outdoor temperature	X		All
	Auxiliary electrical heaters	X		All
	Warm air heater module with gas burner (supplied installed inside a pre-assembly roofcurb)		X	All
	Gas-fired condensing boiler with hot water coil	X (*)		All
Protection low temperature	Freeze protection OAT lower than -10°C	X		All
	Freeze protection OAT lower than -14°C	X		All
	Freeze protection OAT lower than -10°C + spring shut-off dampers	X		All
	Freeze protection OAT lower than -14°C + spring shut-off dampers	X		All
Supply fan	High available pressure of the supply fan	X		All
	Low available pressure of the supply fan	X		All
Air filtration + droplet eliminator	Droplet eliminator after the indoor air coil	X	X	All
	Low pressure drop G4 filters	X	X	All
	G4 filters + M6, F7 or F9 folded filters	X	X	All
	Low pressure drop G4 filters + F7 or F9 folded filters	X	X	All
	Double stage of folded filters: M6+F7, M6+F9, F7+F9 or F9+F9	X	X	All

E: air exhaust

Active recovery (BA and BB assemblies)

The unit is fitted with a thermodynamic circuit dedicated to the recovery of the extracted air energy, with independent and proportional control, adapted to the air renewal requirements in order to raise the COP, EER and seasonal efficiency.

FACTORY OPTIONS AND ACCESSORIES (CONT.)

Passive recovery (BW and RW assemblies)

The heat recovery wheel is used to transfer the sensible and latent heat from the air-conditioned room's return air to the fresh air used for ventilation, before it's discharged outdoors.

The return air circulates in half of the heat recovery unit and the ventilation air circulates in the other half, in the opposite direction. As the rotor rotates, very fine channels of air which form the matrix come into contact with the fresh air and the return air in turn, thereby transferring heat and humidity from one to the other.

The efficiency of energy recovery depend on the wheel selected: wheel material, channel cross section, air filtration and type of speed control.

The heat recovery wheel is fitted into a module placed on one side of the unit (assemblies BW and RW). This module is supplied disassembled with the unit, for installation on site.

Electrical power

■ These units can be supplied for the following power supply voltages:

- 400 V / 3 ph + N / 50 Hz (standard)
- 400 V / 3 ph / 50 Hz (optional)

Coils coating

- Coil with copper-made pipes and fins. Upon request.
- INERA® coils with aluminium alloy fins of high performance and great resistance to the corrosion, and copper pipes.
- Coils with polyurethane precoated aluminium fins and copper pipes.
- Blygold® coating.

Note: These coating can be applied to various coils (outdoor, indoor and hot water coil) according to the combinations available in our "Selection Software".

Heating

The unit only can incorporate one of these heating elements:

■ **Auxiliary electrical heaters**, with two power stages and on/off control, for assembly and connection inside the unit.

- Up to 3 values of total power available for each model:

50FF/FC	020 to 047	052 to 062	070 to 093
RAF (Low)	12 kW	12 kW	18 kW
RAM (Nominal)	18 kW	18 kW	27 kW
RAS (High)	unavailable	27 kW	36 kW

■ **Auxiliary hot water coil**, with three-way valve and proportional control, for assembly inside the unit.

- The unit incorporates a freeze protection thermostat.
- There are two configuration types available:
 - Standard (HAS), the only safety system is the freeze protection thermostat.
 - Very low outdoor temperature (HAF), with freeze protection technology based on the water temperature. This protection is made up of a circulation pump as well as two sensors inserted in the input and the output of the coil.

Important: this option is mandatory for an outdoor temperature lower than -20°C WB. Consult for percentages of glycol water above 20%.

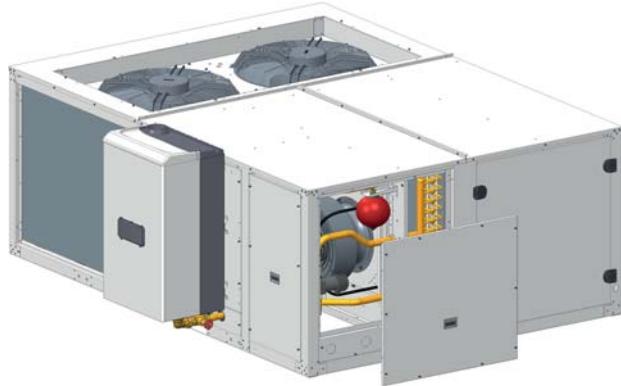

Note: on units with this option, air supply only may be lateral (factory-configured).

Gas-fired condensing boiler with hot water coil.

Natural or propane gas boiler with modulating actuator, in accordance with the Gas Directive 2009/142/EC, mounted on the side of the unit.

- The boiler is connected to the water circuit of the auxiliary coil.
- Up to 3 values of total power available for each model:

50FF/FC	020 to 047	052 to 062	070 to 093
BBF (Low)	unavailable	Condexa PRO 50 (coming soon)	Condexa PRO 50 (coming soon)
BBM (Nominal)	Condexa PRO 40 (coming soon)	Condexa PRO 70	Condexa PRO 70
BBS (High)	Condexa PRO 70	Condexa PRO 100	Condexa PRO 100

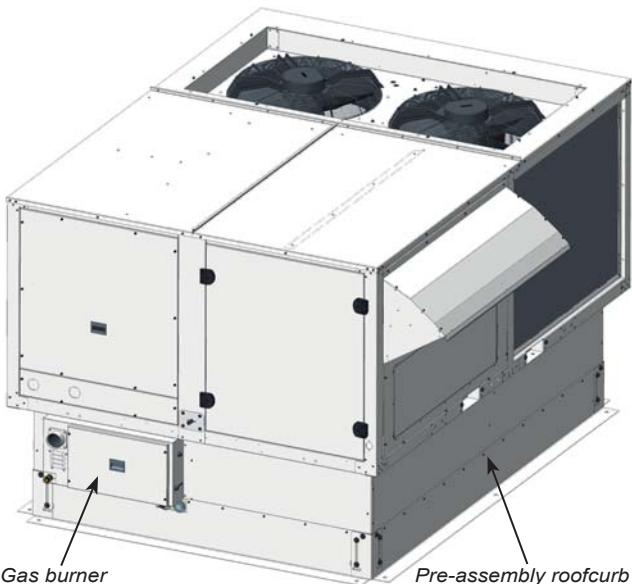

■ **Warm air heater module with gas burner** with modulating actuator, in accordance with the Gas Directive 2009/142/EC, installed inside a pre-assembly roofcurb.

- Condensation boiler with premixing and modulation technology that allows outputs close to 109% with regard to the lower heating value (LCV).
- Up to 3 values of total power available for each model:

50FF/FC	020 to 047	052 to 062	070 to 093
BAF (Low)	PCH020	unavailable	unavailable
BAM (Nominal)	PCH034	PCH065	PCH080
BAS (High)	PCH045	PCH080	PCH105

Note: It's recommended to use the clogged filter pressostat (optional) in units with gas burner.

FACTORY OPTIONS AND ACCESSORIES (CONT.)

Protection for low outdoor temperature

- Freeze protection OAT lower than -10°C. Mandatory for an outdoor temperature lower than -10°C WB.
 - Electrical heater for protection of the components of the electrical cabinet.
 - Compressor with protection for low temperature.
- Freeze protection OAT lower than -14°C. Mandatory for an outdoor temperature lower than -14°C WB.

In addition to the options of -10°C, this includes:

 - Reinforced electrical heater for protection of the components of the electrical cabinet.
 - Electrical heater for anti-freeze protection of dampers of the economizer (if applicable).
 - Protective kit of the gas burner for low temperature (if applicable).
- Freeze protection OAT lower than -10°C + spring shut-off dampers in case of a power failure.
- Freeze protection OAT lower than -14°C + spring shut-off dampers in case of a power failure.

Supply fan

- There are 3 optional fans depending on the available pressure:
 - Low pressure (F): all models except for 070 and 074.
 - Nominal pressure (N): all models.
 - High pressure (S): models 052 to 093.

Important: our "Selection Software" will choose the supply fan with lower consumption for the available pressure required.

Air filtration + Droplet eliminator

Options to improve indoor air quality:

- Different combinations of filters are available:
 - G4 gravimetric filters with low pressure drop.
 - G4 gravimetric filters + M6, F7 or F9 folded opacimetric filters.
 - G4 gravimetric filters with low pressure drop + F7 or F9 folded opacimetric filters.
 - Double-stage of folded opacimetric filters (M6+F7, M6+F9, F7+F9 or F9+F9).

Classification of our filters according to the new ISO 16890 Standard:

- G4 → ISO Coarse 60%
- M6 → ISO ePM2.5 50%
- F7 → ISO ePM1 60%
- F9 → ISO ePM1 90%

- Droplet eliminator after the indoor air coil. Recommended in cases where a high moisture content in the air is foreseen or when the air flow is high.

Note: with hot water coil it is not possible to assemble the droplet eliminator.

Outdoor fan

- Two-speed direct-driven axial fan(s). Watertight motor class F, IP54 and internal thermal protection. Dynamically balanced propellers and outdoor protective grille.

Insulation

- Thermal and acoustic insulation in ceramic fibre, Euroclass A2-s1, d0 (M0) fire classification.

Note: panels and registers of the indoor unit always include thermal and acoustic insulation, with Euroclass A2-s1, d0 (M0) fire classification.

Indoor unit

- Condensate drain pan in stainless steel for corrosion protection.
- Room overpressure management (available in BP, BT, BW, RP and RW assemblies). In installations with different air flow in supply and return, to prevent the entry of outdoor air or to eliminate odours from inside, the fresh air damper and the exhaust damper will be managed independently.
- Filter fouling detection with differential pressure switch.

Outdoor unit

- Outdoor coil protection grid.
- Droplet eliminator at the fresh air intake. This one and the thermoenthalpic free-cooling are necessary in cases where a high moisture content in the air is foreseen.
- Antivibration mounts made of rubber.

Heat recovery wheel

- The heat recovery wheel is fitted into a module placed on one side of the unit (BW and RW assemblies).

The efficiency of energy recovery depend on the wheel selected: wheel material, channel cross section, air filtration and type of speed control.

Extra heating

- Heat recovery coil (HRC). The coil function is to pre-heat the air that will pass through the main indoor coil. For this, it uses the temperature of an outdoor water installation.

This option is compatible with B1, B2, BT, BB, R1 and R2 assemblies.

Special applications

- Zoning of the air flow up to 4 different zones with a minimum air flow of 35 %. This function allows to adapt the indoor air flow to the requirements of the installation.
- Low return temperature application. This function allows to blow air with low temperature attending to the demands of the installation.

Sensors

- Ambient temperature sensor(s). There are 3 options:
 - One NTC sensor connected to the control board.

Note: An ambient sensor with RS485 communication is required for installation at more than 30 meters.
 - Up to four sensors with RS485 communication.
 - Sensor(s) installed on the master unit of the local network (pLAN).
- Dual ambient temperature-humidity sensor(s). Up to four sensors with RS485 communication or installed on the pLAN network. This sensor is compulsory in units with enthalpic or thermoenthalpic free-cooling (optional). In this case, the outdoor air humidity sensor is also added.
- CO₂ sensor for air quality control. There are 3 options:
 - Sensor for installation in the environment.
 - Sensor for ducted installation.
 - Sensor installed on the master unit of the local network (pLAN).
- Smoke detection control unit in accordance with the NF S 61-961 standard.

FACTORY OPTIONS AND ACCESSORIES (CONT.)

Economizer management + outdoor humidity

- The economizer allows to make best use of outdoor air conditions when these are more favourable than the return air conditions. This allows the cooling capacity to be reduced. The percentage of outdoor air can vary between 0% and 100%.

The economizer management can be:

- Thermal, by comparing the temperatures.
- Enthalpic, by comparing the enthalpies. Recommended in cases where a high moisture content in the air is foreseen.
- Thermoenthalpic, by comparing the enthalpies and correcting for temperature. This is the optimum solution as it takes the variability of the climate into account.

- Outdoor air humidity sensor (compulsory in units with optional enthalpic or thermoenthalpic free-cooling).

There are 2 options:

- Sensor supplied with the unit.
- Sensor installed on another unit of the local network (pLAN).

Terminal + unit communication

- By default, the electronic control is supplied with a graphic terminal installed in the electrical cabinet of the unit, but these other configurations also are available:

- Graphic terminal installed in the electrical cabinet and User terminal remote up to 100 meters.
- Graphic terminal installed in the electrical cabinet and Graphic terminal remote up to 200 meters (two TCONN bypass cards must be used from 50 to 200 meters).
- User terminal installed in the electrical cabinet, instead of the graphic terminal.
- User terminal installed in the electrical cabinet and Graphic terminal remote up to 200 meters (two TCONN bypass cards must be used from 50 to 200 meters).
- Touch panel installed in the electrical cabinet, instead of the graphic terminal.
- Touch panel installed in the electrical cabinet and Graphic terminal remote up to 200 meters (two TCONN bypass cards must be used from 50 to 200 meters).
- Touch panel installed in the electrical cabinet and User terminal remote up to 100 meters.

- Control without terminal (for units with shared terminal in a pLAN network).

- By default, the electronic control is configured for a stand-alone unit, but it is also possible to place it in a pLAN network (Local Area Network) as Master or Slave.

- This control allows the connection to a centralised technical management system by using a specific BMS card for some of the following communication protocols:

- RS485 serial cards for network communication with protocols: Carel, Modbus, LonWorks®, BACnet™ MSTP, Konnex.
- Ethernet pCO Web card for network communication with protocols: Modbus TCP/IP, BACnet™ Ethernet, TCP/IP, SNMP V1-2-3, FTP and HTTP.

Miscellaneous item 1

- Management of an humidifier with on-off or proportional control.
- Electrical energy meter for monitoring of the power consumption of the installation.
- Cooling capacity and electrical energy meter. In addition to the energy meter, the unit incorporates mixing and supply enthalpic sensors with RS485 communication that enable cooling and heating capacities to be calculated.

Miscellaneous item 2

- Compressor soft starter.
- High performance phase sequence relay, which allows the protection settings to be adjusted (highly recommended for installations with power system voltage instability, lag between current and voltage, high level of electromagnetic disturbances EMC, etc).
- High grade switching devices.
- Varnish protection for the components on the electrical cabinet: control board, cards and terminals.

Centrifugal return fan

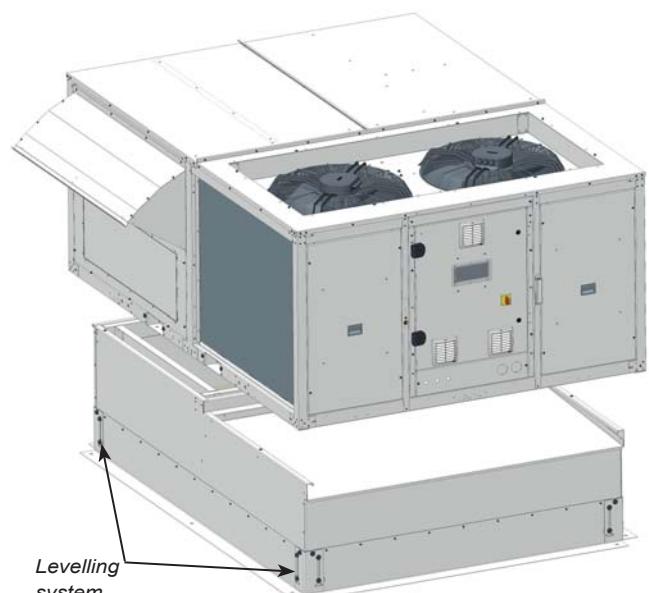

- Centrifugal return fan, coupled by pulleys and belts. Electric motor with tensioner, class F, IP55 and internal thermal protection. Turbine with an impeller of front-curved blades. Greased spherical bearings, with no maintenance required. Available in BB and BT assemblies.

There are 6 fan options depending on the air flow and the available pressure.

Pre-assembly roffcurbs

- "Standard" assemblies can rest on pre-assembly roffcurbs with adjustable height, built in galvanised steel panelling with polyester paint and thermal insulation.

The levelling system uses angle pieces that allow adjustments in the X and Y axes.

- "In-line" assemblies have a wide range of adaptation roffcurbs which are ready for replacing units on renovation from different manufacturers (upon request).

SOUND LEVELS dB(A)

Sound power level (LW)

50FF/FC	020	028	037	040	045	047	052	058	062	070	074	086	093

Sound pressure level (LP)

Measurement conditions: in a clear field, measured at a distance of 5 metres, directivity 2 and at 1,5 metres from the ground.

50FF/FC	020	028	037	040	045	047	052	058	062	070	074	086	093
Total dB(A)	51,0	55,5	56,0	56,0	56,5	57,5	58,3	58,8	59,3	59,3	59,1	59,1	59,6

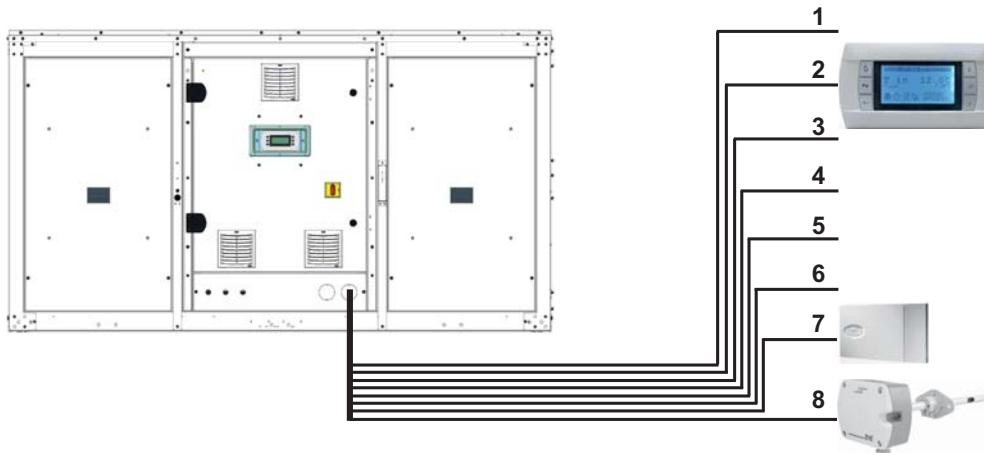

Note: The sound pressure level depends on the installation conditions and, as such, it only indicated as a guide. Values obtained according to the ISO 3744 standard.

ELECTRICAL CONNECTIONS

No.	50FF/FC		020 to 093
1	Main power supply		400 III ($\pm 10\%$)
2	Remote connection of graphic terminal (by default installed on the electrical cabinet) (1)		Telephone cable 6 wires standard (RJ12 connector)
4	Remote off/on (optional)		2 wires
5	General fault signal (optional)		2 wires
6	Circulation pump signal for HWC (antifreeze safety) (optional)		1 wire
7	Ambient sensor	NTC	2 wires
8		RS485	5 wires (2)
9	CO2 sensor (optional)		3 wires

(1) In this case, it's possible to install the user terminal on the electrical cabinet.

(2) Up to four RS485 ambient sensors can be connected in series on the field-bus of the control board.

Output (kW)	0,4 / 0,6			1,2 / 1,9								2 x (1,2 / 1,9)	
Maximum speed (r.p.m.)	690 / 840			670 / 880								670 / 880	
Max. absorbed current (A)	1,2			3,9								2 x 3,9	

OPTIONS FOR THE INDOOR UNIT

Droplet eliminator after the indoor air coil

Air flow at which it is recommended to install a droplet eliminator after the indoor coil.

50FF/FC	020	028	037	040	045	047	052	058	062	070	074	086	093
Air flow (m³/h)	7.776	7.776	10.206	10.206	10.206	10.206	14.580	14.580	14.580	14.580	18.468	18.468	18.468

Note: for operating conditions with high dehumidification in the indoor coil (e.g. in installations close to the coast) it may be necessary to install a separator even if the flow is less than the previous one.

Note: with hot water coil it is not possible to assemble the droplet eliminator.

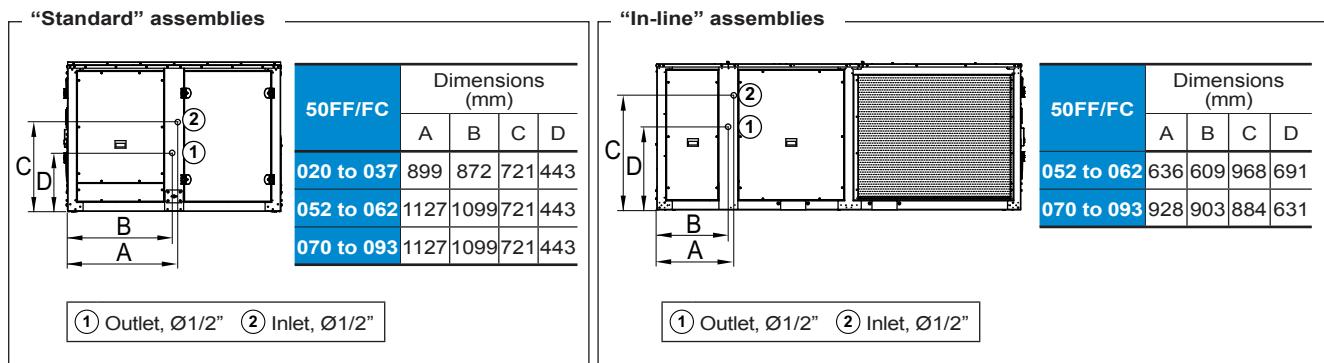

Heat recovery coil

The function of the heat recovery coil is to pre-heat the air that will pass through the main indoor coil. For this, it uses the temperature of an outdoor water installation. Unit's control doesn't manage this function.

This option is compatible with B1, B2, BT, BB, R1 and R2 assemblies.

50FF/FC	020	028	037	040	045	047	052	058	062	070	074	086	093

Heat recovery wheel module (BW / RW assemblies)

This heat recovery wheel is used to transfer the sensible and latent heat from the air-conditioned room's return air to the fresh air used for ventilation, before it's discharged outdoors. The return air circulates in half of the heat recovery unit and the ventilation air circulates in the other half, in the opposite direction. As the rotor rotates, very fine channels of air which form the matrix come into contact with the fresh air and the return air in turn, thereby transferring heat and humidity from one to the other.

The efficiency of the recovery depends on the following factors:

■ Wheel diameters:

- 800 mm: models 020 to 047
- 1200 mm: models 052 to 062
- 1500 mm: models 070 to 093

■ Matrix materials:

- Aluminium: sensible heat recovery.
- Epoxy coated aluminium: sensible heat recovery in aggressive environments.
- Hybrid wheel: enthalpic recovery.
- Silicagel coated aluminium: enthalpic recovery with high efficiency in the recovery of latent heat.

■ Channel cross section:

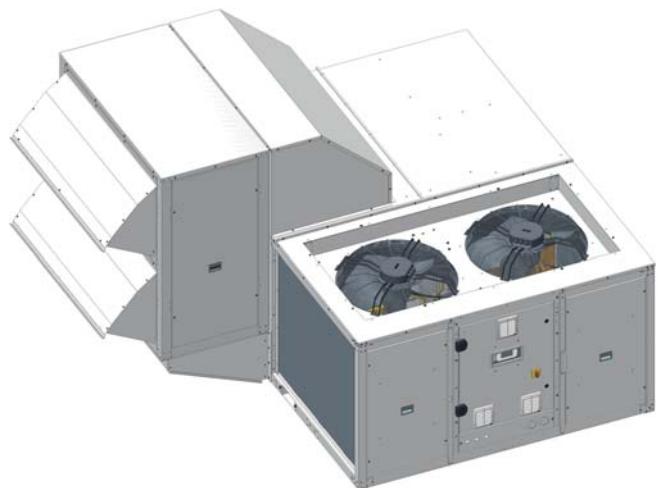

The wheel is formed of two panels of aluminium, one smooth and one fluted. The fluted panel can be provided in two different configurations:

- 2.0 mm cross section: the commonly-used cross section due to its high efficiency and moderate pressure drops.
- 2.5 mm cross section: low pressure drop. Designed for high frontal speeds with low pressure drops.

The heat recovery wheel is fitted into a module placed on one side of the unit.

This module features filters on the fresh air intake and the exhaust air outlet: gravimetric filters G4 (default option), G4 with low pressure drop or G4 + M6 (optional).

This assembly can be supplied, in option, with a speed drive for the wheel which avoids the risk of ice forming on the wheel during the defrost operation. The speed drive is compulsory with output temperatures on both sides of the wheel lower than 1°C or an average temperature on the wheel lower than 3°C.

Important: the calculations for the selection of a heat recovery wheel according to the parameters described above should be done using our "Selection Software".

OPTIONS FOR THE INDOOR UNIT (CONT.)

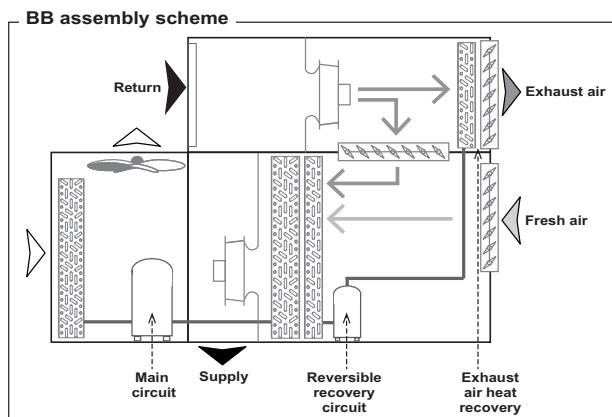

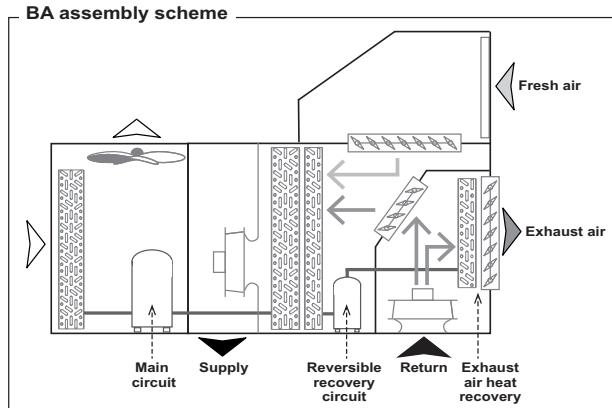

Cooling recovery circuit (BA / BB assemblies)

Thermodynamic circuit dedicated to the recovery of the extracted air energy, with independent and proportional control, adapted to the air renewal requirements in order to raise the COP, EER and seasonal efficiency of the unit set.

■ The circuit is composed of:

- EC plug-fan in return section.
- Air circuit comprised of coils with copper pipes and aluminium fins.
- Electronic expansion valve.
- Hermetic scroll-type compressor with sound insulation, assembled over antivibration mounts.
- Crankcase heater.
- Four-way cycle reversing valve.
- Anti-acid dehydrator filter.
- High and low pressure transducers.
- Condensates drain pan.

OPTIONS FOR THE INDOOR UNIT (CONT.)

Auxiliary electrical heaters

Auxiliary electrical heaters, with two power stages and on/off control, for assembly and connection inside the unit.

- Up to 3 values of total power available for each model:

50FF/FC	020 to 047	052 to 062	070 to 093
RAF (Low)	12 kW	12 kW	18 kW
RAM (Nominal)	18 kW	18 kW	27 kW
RAS (High)	unavailable	27 kW	36 kW

- Characteristics:

Total power (kW)	12	18	27	36
Stages power (kW)	6 + 6	9 + 9	9 + 18	18 + 18
Current (400 V / III ph) (A)	17,3	26,0	39,0	52,0
Power supply	400 V / III ph			

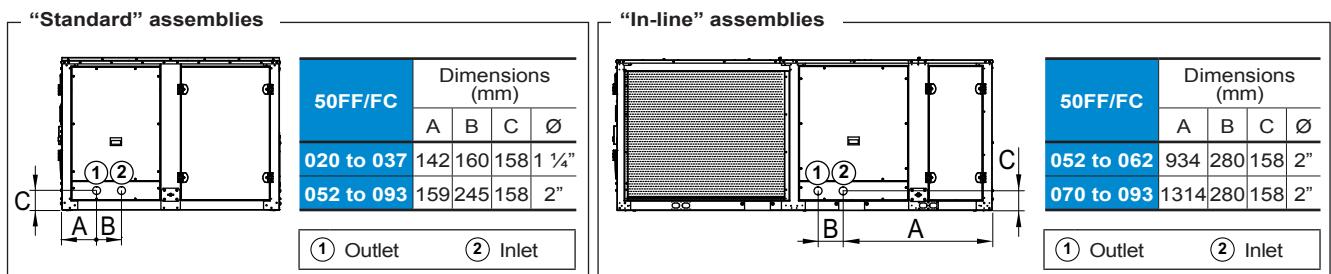

Auxiliary hot water coil

Auxiliary hot water coil, with three-way valve and proportional control, for assembly and connection inside the unit. This option always incorporates a freeze protection thermostat.

50FF/FC		020	028	037	040	045	047	052	058	062	070	074	086	093

Note: With droplet eliminator after the indoor air coil it is not possible to assemble the hot water coil.

Position of the hydraulic connections of the hot water coil

Note: The Input / Output connections of the coil are located inside the unit. The connection can be established via the unit base using flexible tubing or via the side panel. In the above diagrams, the position of the sheet metal precuts is shown on the side panel.

"Very low outdoor temperature" option (HAF)

Note: on units with the "Very low outdoor temperature" option, air supply only may be lateral (factory-configured).

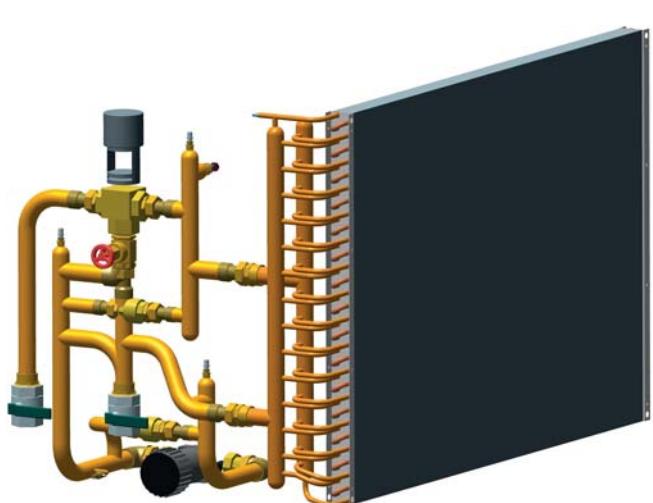

- This anti-freeze safety incorporates:

- Circulation pump.
- Water temperature sensors located in the inlet and the outlet of the coil.

Important: this option is mandatory for an outdoor temperature lower than -20°C WB. Consult for percentages of glycol water above 20%.

- Characteristics of the water circuit:

50FF/FC	020 to 047	052 to 093
Circulation pump	Motor output (W)	90
	Max. absorbed current (A)	0,75
		1,15

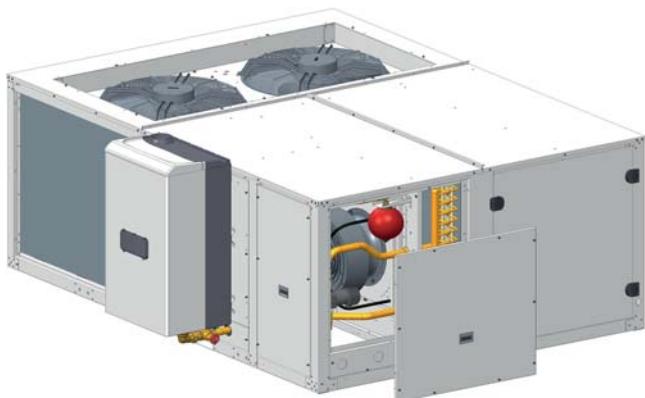

OPTIONS FOR THE INDOOR UNIT (CONT.)

Gas-fired condensing boiler with hot water coil

Gas-fired condensing boiler with modulating actuator, in accordance with the Gas Directive 2009/142/EC, mounted on the side of the unit.

EC certification: 0085CP0214.

■ Up to 3 values of total power available for each model:

50FF/FC	020 to 047	052 to 062	070 to 093
BBF (Low)	unavailable	Condexa PRO 50 (coming soon)	Condexa PRO 50 (coming soon)
BBM (Nominal)	Condexa PRO 40 (coming soon)	Condexa PRO 70	Condexa PRO 70
BBS (High)	Condexa PRO 70	Condexa PRO 100	Condexa PRO 100

■ The key features of the boiler are:

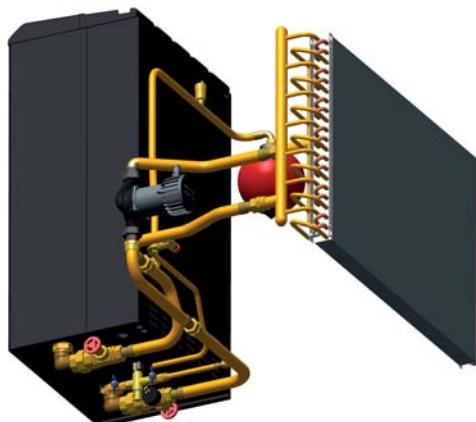

- Natural or propane gas boiler.
- Burner with premixing and modulation technology that allows outputs close to 109% (Hi performance).
- Heat exchanger made of stainless steel with a low carbon content.
- Proportional air / gas valve. Low NOx emissions (class 5, according to standard EN 297).
- Condensate drain with siphon.
- Forced draught.
- Electronic ignition.
- Safety devices: safety thermostat, low water pressure safety switch, flowmeter, Delta-T control, smoke temperature sensor.
- NTC sensor for boiler water temperature regulation.
- Working temperature of water from -7°C to 100°C. Consult for percentages of glycol water above 20%.
- Electronic controller with microprocessor and Multifunction LCD display for boiler's control, configuration and diagnostics. Possibility of ModBus communication.
- The electronic control of the unit will only manage the boiler connection as heating support depending on the ambient conditions.

■ The boiler is connected to the hydraulic circuit of the auxiliary hot water coil. The water circuit, installed inside the unit, is composed of:

- Water coil.
- Circulation pump.
- Expansion vessel.
- Gate valves.
- Safety valve with a tare value of 4 bar.
- Automatic air bleeder valve.

■ Characteristics of the water circuit:

	50FF/FC	020 to 047	052 to 093
Expansion vessel	Volume (l)	5	5
	Filling pressure (kg/cm ²)	1,5	1,5
Circulation pump	Motor output (W)	90	140
	Max. absorbed current (A)	0,75	1,15

■ Type of gas used depending on the destination country:

NOTES:

- Drawings are not contractually binding.
- Before designing an installation, consult the certified dimensional drawings, available on request.

IMPORTANT:

- The flue of the gas boiler is not supplied with the unit. Its design and installation is the responsibility of the installer and must comply with all the directives and regulations in force in the installation location.

OPTIONS FOR THE INDOOR UNIT (CONT.)

Warm air heater module with gas burner

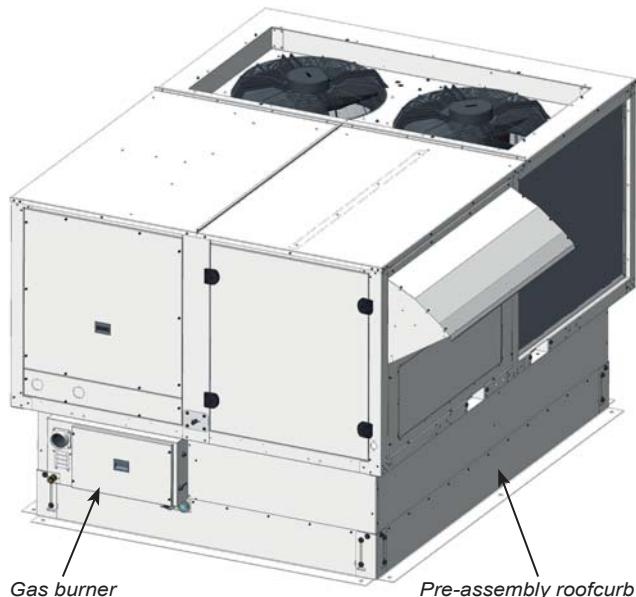

Warm air heater module with gas burner with modulating actuator, in accordance with the Gas Directive 2009/142/EC, installed inside a pre-assembly roofcurb.

- Up to 3 values of total power available for each model:

50FF/FC	020 to 047	052 to 062	070 to 093
BAF (Low)	PCH020	unavailable	unavailable
BAM (Nominal)	PCH034	PCH065	PCH080
BAS (High)	PCH045	PCH080	PCH105

- The key features of the boiler are:

- Natural or propane gas burner.
- Condensation boiler with premixing and modulation technology that allows outputs close to 109% (Hi performance).
- The premixed burner, in combination with the air/gas valve, ensures a "clean" combustion. Low NOx emissions (class 5, according to standard EN 297).
- The combustion chamber and the burner are entirely made of stainless steel.
- Electronic controller with microprocessor and multifunction LCD display, located inside the burner, for burner's control, configuration and diagnostics.
- The electronic control of the unit will only manage the burner connection as heating support depending on the ambient conditions.

Note: It's recommended to use the clogged filter pressostat (optional) in units with gas burner.

Note: Drawings of roofcurb with gas burner can be consulted on pages 93 to 95.

(1) The pressure drops in the filters are based on clean filters. Data refer to the difference with regard to the G4 pressure drops (standard), considered as part of the machine pressure drops.

(2) The pressure drops in the droplet eliminator of the fresh air intake are based on 20% of flow.

Abbreviations:

I.p.d. = low pressure drop

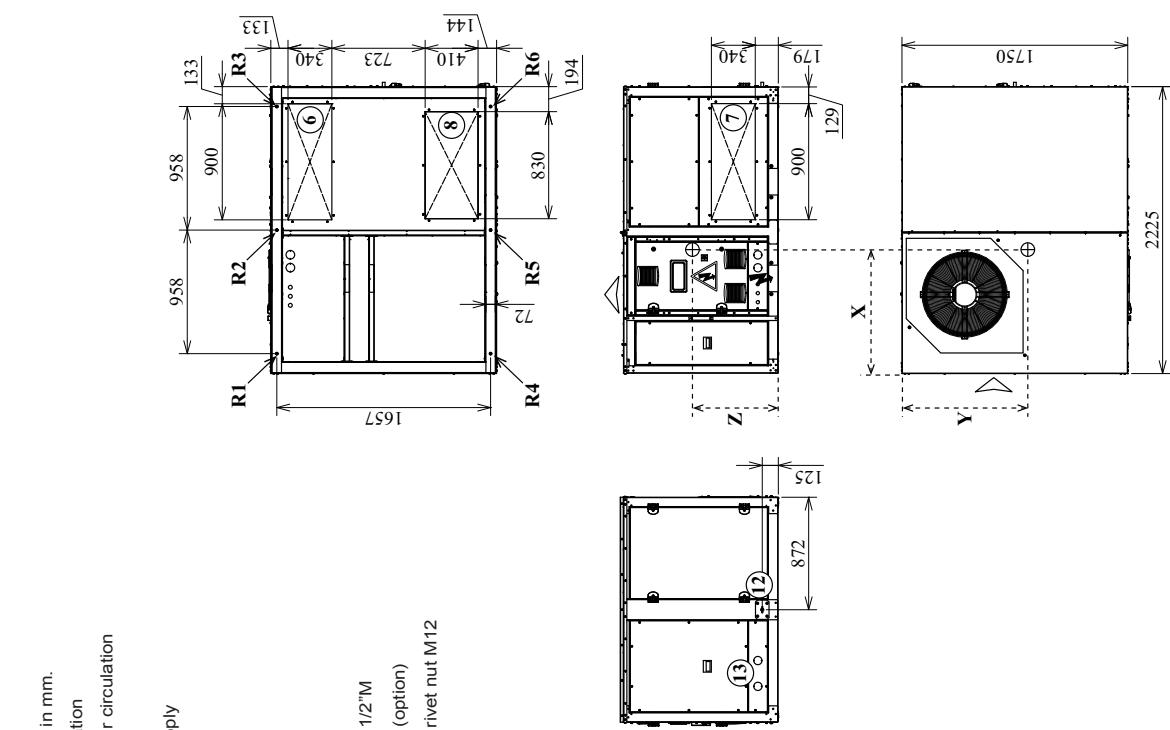

H.W.C. = hot water coil

E.H. = electrical heaters
